1. Executive Summary

This report presents a comprehensive analysis of Vrinda Store's e-commerce sales performance for the period January–December 2022, based on 31,047 order line items spanning 28,471 unique orders and 28,437 unique customers across seven sales channels and 50 Indian states. The objective is to translate the raw transactional dataset into actionable business insight: revenue drivers, customer behaviour, channel efficiency, and fulfillment quality.

The business generated a total gross revenue of ₹2.12 crore (₹21,176,377) across all order statuses, of which ₹1.97 crore (93.1% of gross value) was successfully delivered. Women's wear contributed 64.1% of revenue against 35.9% from men's wear, and the "Set" category alone accounted for nearly half of total sales value. Amazon remained the leading channel by both revenue and order volume, while order attrition (cancelled, returned, or refunded) held at a manageable 7.75% of all orders — though with meaningful variation across channels and categories that is explored in Section 8.

Overall, the data points to a stable, delivery-led business with a broad, low-repeat customer base, a revenue mix concentrated in a small number of high-performing categories and cities, and clear, addressable opportunities in returns reduction and channel-level margin management, detailed in the recommendations in Section 12.

2. Project Objective & Scope

2.1 Objective

To analyse Vrinda Store's FY2022 order-level sales data and produce a structured, metrics-driven report that identifies key performance indicators, revenue trends, customer and product patterns, and operational risk areas (cancellations, returns, refunds) — supporting data-informed decisions on inventory, marketing, and channel strategy.

2.2 Scope

- Time period: January 2022 – December 2022 (full calendar year).
- Coverage: All order line items recorded in the Vrinda Store dataset, including Delivered, Cancelled, Returned, and Refunded statuses.
- Dimensions analysed: Revenue and order trends over time; product category and SKU performance; sales channel performance; customer demographics (gender, age); geographic distribution; and order fulfillment / attrition rates.
- Out of scope: Profitability/margin analysis (cost data not present in the source dataset), inventory/stock-level analysis, and marketing spend attribution.

3. Data Overview & Methodology

3.1 Dataset Description

The source workbook contains a raw transactional sheet ("Vrinda Store Data") supplemented by pivot-table summaries. Each row represents one product line item within a customer order.

Attribute	Description
Order ID / Cust ID	Unique order and customer identifiers
Gender / Age / Age Group	Customer demographic attributes
Date / Month	Order date and month
Status	Delivered, Cancelled, Returned, Refunded
Channel	Sales platform: Amazon, Flipkart, Myntra, Ajio, Meesho, Nalli, Others
SKU / Category / Size	Product identifiers and attributes
Qty / Amount	Units ordered and order value (INR)
ship-city / ship-state	Delivery destination
B2B	Business-to-business order flag

3.2 Methodology

- Data was aggregated using group-wise summation and counting across each analytical dimension (time, category, channel, geography, demographics).
- Revenue figures reflect the "Amount" field summed across line items and include all order statuses unless stated as "delivered-only."
- Attrition rate is defined as (Cancelled + Returned + Refunded orders) ÷ Total orders, expressed as a percentage.
- Average Order Value (AOV) is calculated at the line-item level (Amount per row); 91% of orders contain a single line item, so this closely approximates per-order value.
- Figures are rounded to one decimal place; minor rounding differences between totals and category breakdowns may occur.

4. Key Performance Indicators

The table below summarises the headline metrics for the FY2022 period.

₹2.12 Cr Total Revenue	₹1.97 Cr Delivered Revenue	28,471 Total Orders	28,437 Unique Customers
31,047 Order Line Items	₹682 Avg. Order Value	92.25% Delivery Success Rate	7.75% Attrition Rate

4.1 Metric Definitions & Detail

Gross Revenue (all statuses)	₹21,176,377
Revenue – Delivered orders	₹19,710,544 (93.1% of gross)
Revenue – Returned orders	₹719,147
Revenue – Cancelled orders	₹481,844
Revenue – Refunded orders	₹264,842
Average customer age	39.5 years (range 18–78)

Repeat customer rate
B2B share of revenue

0.12% (34 of 28,437 customers)
0.6% (₹126,321 of ₹2.12 Cr)

5. Sales Trend Analysis

Monthly revenue was highest in March (₹19.28 lakh) and lowest in November (₹16.15 lakh), a spread of roughly 16% between peak and trough months. Revenue eased gradually from the March peak through the second half of the year, before a modest recovery in December.

Figure 1: Monthly revenue trend, January–December 2022 (₹ Lakhs)

Month	Revenue (₹)	Orders
January	1,820,601	2,702
February	1,875,932	2,750
March	1,928,066	2,819
April	1,829,263	2,685
May	1,797,822	2,617
June	1,750,966	2,597
July	1,772,300	2,579
August	1,808,505	2,617
September	1,688,871	2,490
October	1,666,662	2,424
November	1,615,356	2,383
December	1,622,033	2,384

Order volume closely tracks revenue month-to-month (correlation is visually near-perfect in the chart above), indicating the fluctuation is driven primarily by order count rather than changes in average order value — AOV stayed within a narrow ₹670–₹700 band all year.

6. Product & Category Performance

Figure 2: Revenue by product category (₹ Lakhs)

Category	Revenue (₹)	Orders	Avg. Value (₹)	Share of Revenue
Set	10,507,546	12,391	848	49.6%
Kurta	4,959,377	10,446	475	23.4%
Western Dress	3,148,836	4,066	774	14.9%
Top	1,186,199	2,193	541	5.6%
Saree	1,010,471	1,380	732	4.8%
Ethnic Dress	195,256	264	740	0.9%
Blouse	140,888	229	615	0.7%
Bottom	27,804	78	356	0.1%

“Set” is the dominant category, generating almost half of all revenue (49.6%) and also commanding the highest average order value (₹848) among high-volume categories, making it both the volume and value leader. Kurta drives the largest order count (10,446) but at a lower average value, positioning it as a high-frequency, lower-ticket product line. The top 10 individual SKUs by revenue are dominated by variants of a single Western Dress style (JNE3797-KR) and a Set style (J0230-SKD), together indicating strong demand concentration in a small number of best-selling designs across sizes.

7. Sales Channel Performance

Sales Channel Mix (by Revenue)

Figure 3: Share of revenue by sales channel

Channel	Revenue (₹)	Orders	Avg. Value (₹)	Share of Revenue
Amazon	7,519,933	11,016	683	35.5%
Myntra	4,941,540	7,254	681	23.3%
Flipkart	4,573,301	6,703	682	21.6%
Ajo	1,331,427	1,931	690	6.3%
Nalli	1,015,329	1,484	684	4.8%
Meesho	927,606	1,398	664	4.4%
Others	867,241	1,261	688	4.1%

Amazon, Myntra, and Flipkart together account for 80.4% of total revenue, confirming the business's dependence on the three largest marketplaces. Average order value is remarkably consistent across channels (₹664–₹690), suggesting channel choice reflects customer reach rather than differences in basket size or product mix.

8. Order Fulfillment & Attrition Analysis

Figure 4: Distribution of orders by fulfillment status

92.25% of orders were successfully delivered. Of the remainder, Returned orders (3.37%) were the largest source of attrition, ahead of Cancelled (2.72%) and Refunded (1.67%). Together, these non-delivered orders represent ₹1,465,833 in lost or at-risk revenue — 6.9% of gross order value.

Figure 5: Combined cancellation / return / refund rate by sales channel

Attrition rates by channel range from 6.8% (Others) to 8.1% (Amazon), a comparatively narrow band, though Amazon's higher order volume means it contributes the largest absolute number of non-delivered orders. By category, “Bottom” (16.7%) and “Western Dress” (11.7%) show the highest attrition rates, well above the 7.75% overall average, while “Set” — the top revenue category — has the lowest attrition at 5.0%, a favourable combination of high volume and high fulfillment reliability.

9. Customer Demographics

Figure 6: Revenue by age group and gender

Women customers account for 69.4% of order line items and 64.1% of revenue (₹1.36 Cr vs ₹0.76 Cr for men), making them the primary customer base. Interestingly, men's average order value (₹802) is 27% higher than women's (₹629), indicating men purchase less frequently but at higher basket values, on average. Customers are almost evenly split between “Adult” (81.0% of revenue) and “Senior Citizen” age groups (19.0%), with a mean customer age of 39.5 years.

The customer base is overwhelmingly single-purchase: only 34 of 28,437 customers (0.12%) placed more than one order in the year, and only 2,064 of 28,471 orders (7.2%) contained more than one line item. This points to a largely acquisition-driven, low-repeat business model as of FY2022 — an important input for the retention-focused recommendation in Section 12.

10. Geographic Distribution

Figure 7: Top 10 states by revenue (₹ Lakhs)

State	Revenue (₹)	Orders	Share of Revenue
Maharashtra	2,990,221	4,519	14.1%
Karnataka	2,646,358	3,988	12.5%
Uttar Pradesh	2,104,659	2,882	9.9%
Telangana	1,712,439	2,527	8.1%
Tamil Nadu	1,678,877	2,679	7.9%
Delhi	1,248,111	1,804	5.9%
Kerala	1,008,940	1,549	4.8%
West Bengal	922,444	1,425	4.4%

Orders were shipped to 50 states/union territories, but revenue is heavily concentrated: the top 5 states (Maharashtra, Karnataka, Uttar Pradesh, Telangana, Tamil Nadu) generate 52.6% of total revenue. At the city level, Bengaluru is the single largest market (₹16.7 lakh), followed by Hyderabad and New Delhi, reinforcing that demand is anchored in major metro and IT-hub cities.

11. Key Insights

- Revenue is concentrated in a few categories: the “Set” category alone drives ~50% of revenue, making it the single most important line to protect in inventory and marketing planning.
- Marketplace dependency is high: Amazon, Myntra, and Flipkart jointly account for over 80% of revenue, leaving the business exposed to policy or fee changes on any one platform.
- Fulfillment is generally strong (92.25% delivered) but returns outpace cancellations and refunds, and attrition is notably elevated in the Bottom and Western Dress categories.
- Women drive volume, men drive basket size: women generate more orders and revenue overall, but men's average order value is ~27% higher.
- Customer retention is minimal: with a 0.12% repeat-purchase rate, growth in 2022 was driven almost entirely by new customer acquisition rather than repeat buying.
- Demand is geographically concentrated in five states and a handful of metro cities, suggesting focused regional logistics and marketing could be more efficient than a uniform national approach.
- Seasonality is moderate: revenue peaked in March and gradually declined into Q4, without an obvious festive/holiday spike in the available data — worth validating against marketing calendar and promotional history.

12. Recommendations

12.1 Product & Inventory

- Prioritise stock availability and design refreshes for the “Set” category given its outsized revenue contribution and comparatively low attrition rate.
- Investigate root causes of the elevated return rate in “Bottom” and “Western Dress” (sizing, product description accuracy, quality) before scaling marketing spend on these lines.

12.2 Channel Strategy

- Continue to invest in Amazon, Myntra, and Flipkart as primary channels, while monitoring Amazon's above-average attrition rate (8.1%) to protect net revenue.
- Evaluate targeted growth investment in Ajio and Nalli, which show comparable AOV and lower attrition than the top three channels, as potential diversification levers.

12.3 Customer Retention

- Introduce retention mechanics (loyalty offers, post-purchase remarketing, bundle deals) given the very low 0.12% repeat-purchase rate — even a modest improvement here would meaningfully lift lifetime value.
- Explore cross-sell strategies to increase line items per order beyond the current 7.2% multi-item order rate.

12.4 Geographic & Operational

- Prioritise fulfillment infrastructure (warehousing, last-mile partners) in the top five revenue states to protect delivery reliability where volume is highest.
- Pilot region-specific marketing in high-value metro cities (Bengaluru, Hyderabad, New Delhi, Mumbai, Chennai) rather than a uniform national campaign.

13. Conclusion

Vrinda Store's FY2022 performance reflects a healthy, delivery-led e-commerce operation generating over ₹2.1 crore in gross revenue across a broad national customer base. The business's strength lies in a small number of high-performing categories and marketplace channels, but this concentration is also its principal risk: revenue, channel mix, and geography are all narrowly distributed. The most actionable opportunities identified in this analysis are reducing category-specific return rates, deepening the retention of an almost entirely one-time customer base, and building operational resilience around the top revenue-generating states and channels. Addressing these areas would help convert a strong single-year performance into a more durable, diversified growth trajectory.

14. Appendix

14.1 Data Dictionary

See Section 3.1 for the full field list. All monetary figures are in Indian Rupees (INR); the dataset covers a single currency and country (IN).

14.2 Assumptions & Limitations

- The dataset does not include cost-of-goods or marketing spend, so all analysis is revenue-based; profitability and ROI are outside the scope of this report.
- Average Order Value is calculated at the line-item level; since 91% of orders contain exactly one item, this closely but not exactly represents true per-order value.
- “Attrition rate” combines Cancelled, Returned, and Refunded statuses into a single non-delivered measure for comparability across channels and categories.
- Figures are drawn directly from the source workbook (raw data sheet and existing pivot tables) as of the report date; any subsequent data updates are not reflected here.
